EveryCloud
YOUR SILVER LINING

EveryCloud Email Protection Service

Cloud Based Anti-Spam, Anti-Virus and Business Email Management.

Block spam and email viruses in the cloud before they reach your network, whilst taking control of your business email. Leave your email entirely secure and free up thousands of business hours for your workforce.
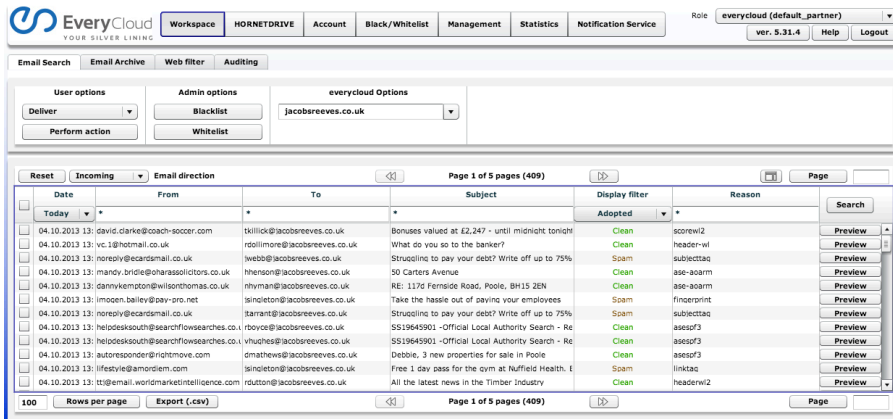

Complete protection against spam, viruses, malware, phishing, denial of service attacks and data loss for your oganisation, without the time or expense of managing hardware and software systems.

EveryCloud Email Protection Service provides managed email security for email servers and has the option of Email Continuity to provide a 90 day rolling archiving of filtered email

Cloud Protection v's Software / Hardware

Spam Filter software and appliances all share one significant security problem; they are installed inside your network. Therefore malicious mails are already within your network, putting your systems at risk and burdening your infrastructure, before they are even detected.

In addition these old technologies require resource heavy administration to provide a desirable level of protection meaning you're paying even more in staff costs. If administered improperly the intended protection may even cause the opposite; serious gaps in security and the potential for lost emails.

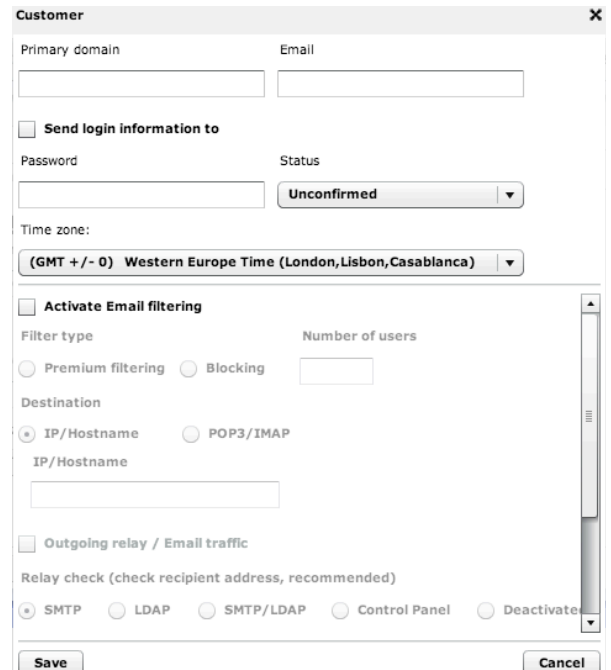

Control Panel details the last 90 days of inbound and outbound emails.

Partners can set-up their own clients, add alias domains and control where filtered emails are delivered. Address registration can be enforced by LDAP.

Our System

After simply changing the organisations mail exchange (MX) records, all inbound and outbound mail from your mail server is seamlessly filtered through one of our secure data centres.

Our filters scan mail, typically in under 1-second, removing any malware and other unwanted content before passing genuine mail onto your users. Administrators can manage all domains and users from one fast yet robust control panel.

EveryCloud
YOUR SILVER LINING

Feature	Benefit
Pricing based on users (not mailboxes or domains).	Low and predictable overall cost with a system that can be easily scaled to fit your future needs.
Fast and easy deployment including the ability for resellers to set-up accounts automatically.	No additional set-up costs or resource required from the business.

Optional footers added to emails - Add disclaimers and / or marketing messages.
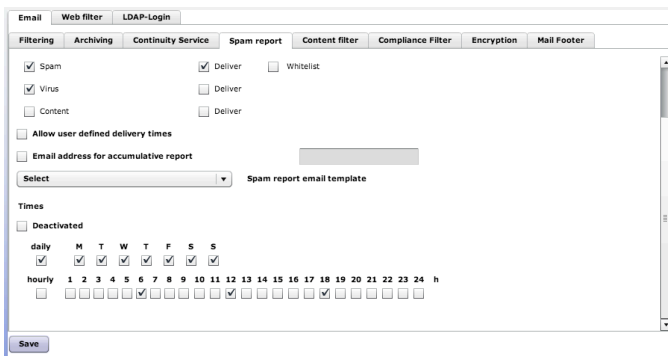

Administrators can configure spam reports for flexible delivery

How the Email Protection Service Works

• Clients change their Mail Exchange (MX) records, sending the flow of email to the EveryCloud Email Protection service.

• Inbound and outbound email is scanner in under a second.

• EveryCloud detects and quarantines spam and viruses originating from known and unknown sources.

• Email identified as spam is blocked and stored for 90-days.

• Administrators have central access to all spam email with the ability to release or delete messages and full management of approved / blocked sender lists.

• End users can receive customisable spam digest reports at user / administrator defined times, with options to release or add senders to approved senders list.
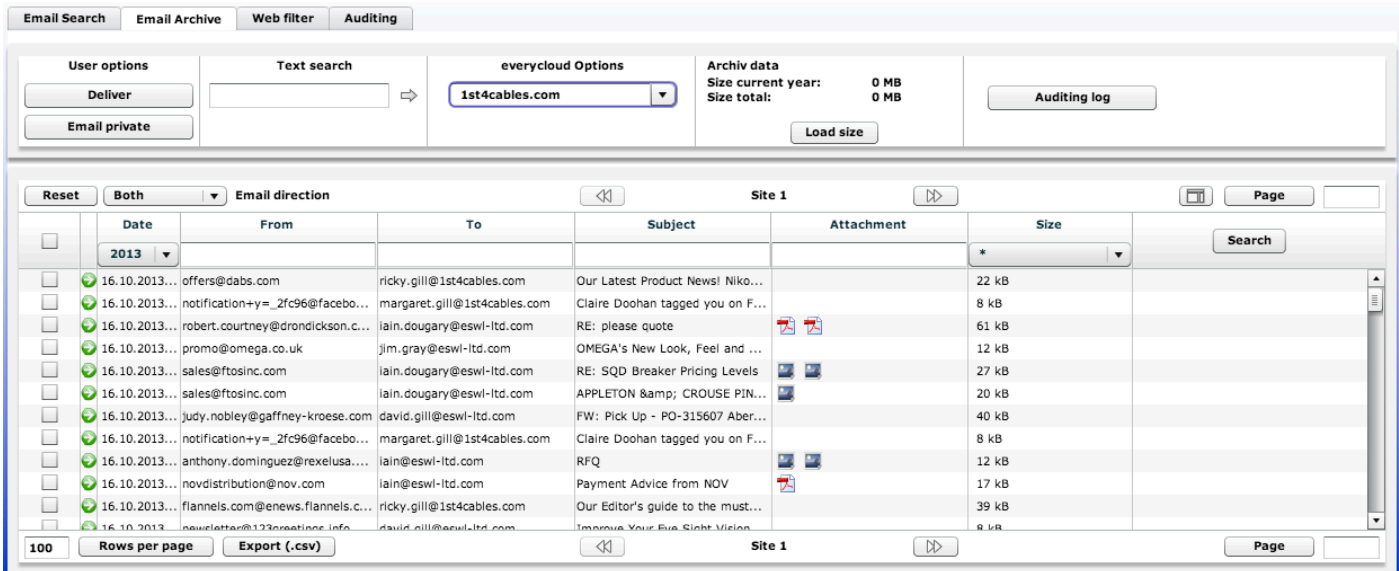

Email Continuity Add On

Email downtime, whether as a result of an outage of failure, is a significant cost to your business. Both the lost time and data can quickly add up to thousands and effectively bring your business to a standstill.

Adding Email Continuity means you can entirely elevate this risk. Our service enables inbound and outbound email to be available from our secure data centres directly to users via a webmail portal and mobile access via POP3/IMAP in the event of a problem occurring.

The service archives and backs-up email in multiple data centres so that whatever the crisis, you business will always have access to email.

Email Continuity is an optional service that EveryCloud Email Protection Service email customers can subscribe to.

Email Continuity stores users last 90-days of email, always ready for an outage.

Benefits

- Complete access to all sent and received emails for a period of 90-days
- Data protection even in a case of a total loss of your company's IT – (e.g. fire damage)
- No expense for hardware, software or maintenance
- Always on and available 24/7
- Ability to "replay" any email sent and received in the last 90-days including the period of the outage.

Archive

Once activated, email continuity captures and stores a rolling 90 days of your businesses email. Rather than starting at the point of failure, it is constantly stored so that there is no risk of the service not activating.

Users can login to webmail before or during an email continuity event.

How the Email Continuity Service Works

- When your primary system is operating normally, the filtering service archives a copy of all genuine email for a rolling window of 90-days
- In the event of an email outage, end users access the continuity service via web console. Mobile access via POP3/IMAP is also available
- During the outage, all activated users have access to email
- When your primary system is back online, all email sent or received during the outage is restored to your email server.

Webmail

The feature rich webmail interface provides access to your email from anywhere (during normal operation as well as in a continuity event).

Each user that has subscribed to the Email Continuity service has a hosted archive and continuity mailbox allocated to them.
